

KYOCERA ELCO Corporation Environment Policy

<Introduction>

Under the company creed “Respect the Divine and Love People” and with the managerial creed “Contribute to the advancement of society and humankind as well as pursuing happiness in physical and spiritual worlds for employees”, we, KYOCERA ELCO Corporation (referred to as “KEC” hereinafter), establish our environment policy and promote environmental protection movement as a member of KYOCERA Group Companies based on the environment policy of KYOCERA Group.

<Environment policy>

KEC do the research and development, design, manufacture and domestic and overseas sales for connectors that are electronic components.

While conserving the environment, KEC is conducting ecologically conscious business activities from design, purchasing raw materials and manufacture to discarding.

KEC establish the environment policy as follows and do the environmental management in order to promote the environmental protection globally as well as locally.

1. KEC prevent pollution in order to reduce the impact on destruction of nature and ecosystem by studying and setting our own standards of our self-management as well as complying with international pacts, laws and rules of countries, local regulations established in the place where the company is located or other requirements.
2. KEC evaluate the impact of our business activities on environment, establish and review our environmental purposes and targets as much as technically and economically possible, establish and implement the environment management system and improve it endlessly.
3. KEC control hazardous chemical substances as well as control environment-related equipment and substances in order to reduce the impact on environment.
4. KEC improve the consumption efficiency of electric energy and fossil fuel, introduce high efficiency devices for them, and actively take measures to curb greenhouse gas emissions.
5. KEC establish the recycle system for waste materials and products to utilize resources definitely-effectively and to reduce the amount of garbage positively as well as make the best effort to purchase materials that are excellent for resource saving and recycling.
6. KEC research and develop “Products to reduce environmental hazard” that could reduce the impact on environment as much as possible in each phase of production, sales, distribution, use and discard of products.
7. KEC create and expand comfortable environment with lush greenery, and participate in and support contributive social activities.
